

Assignment-15:

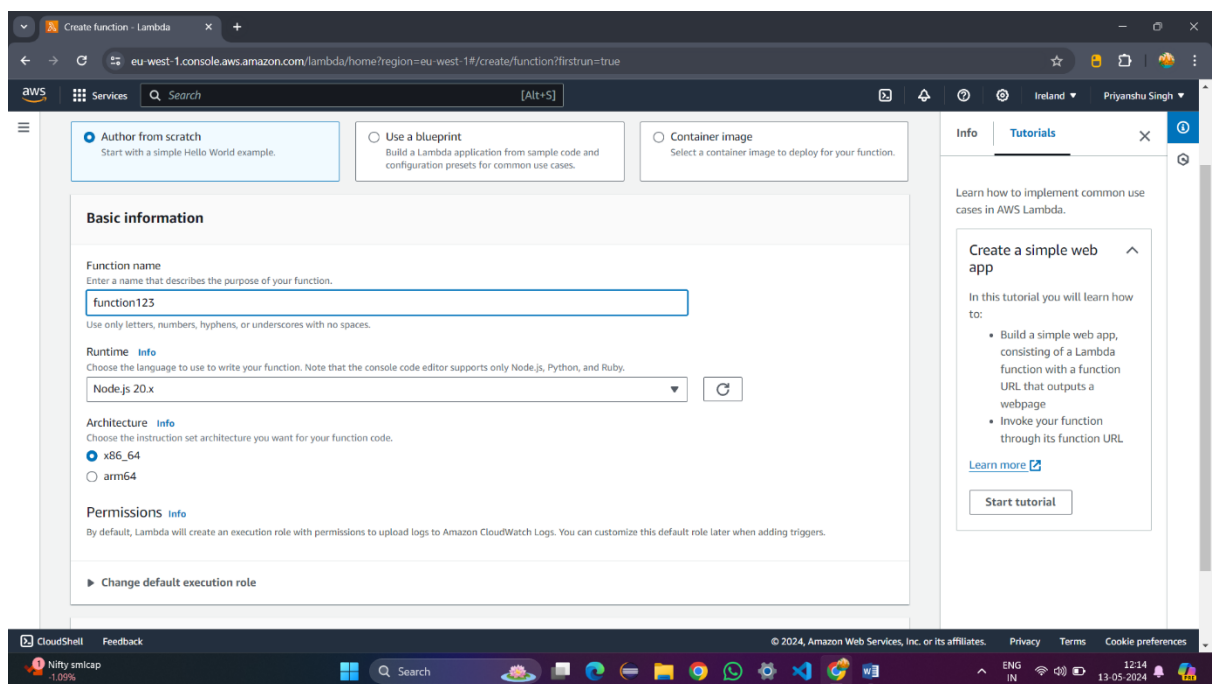

Create a Serverless computing service.

Steps:-

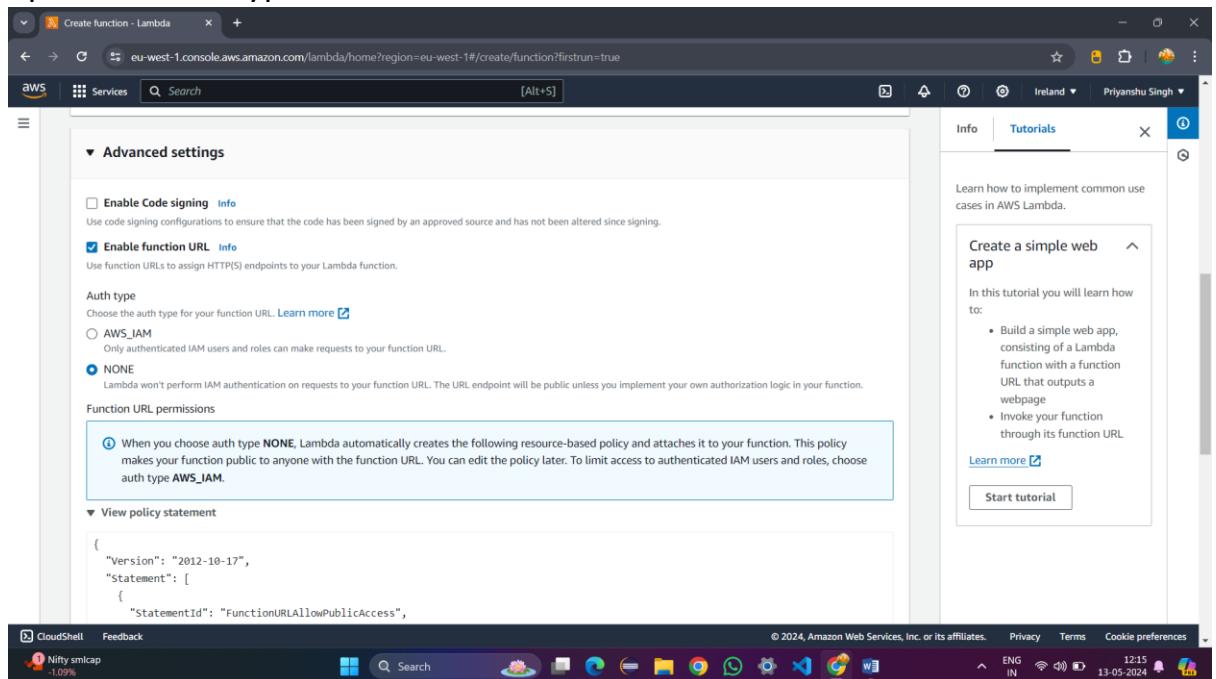

1. Go to Lambda then click on Create a function.

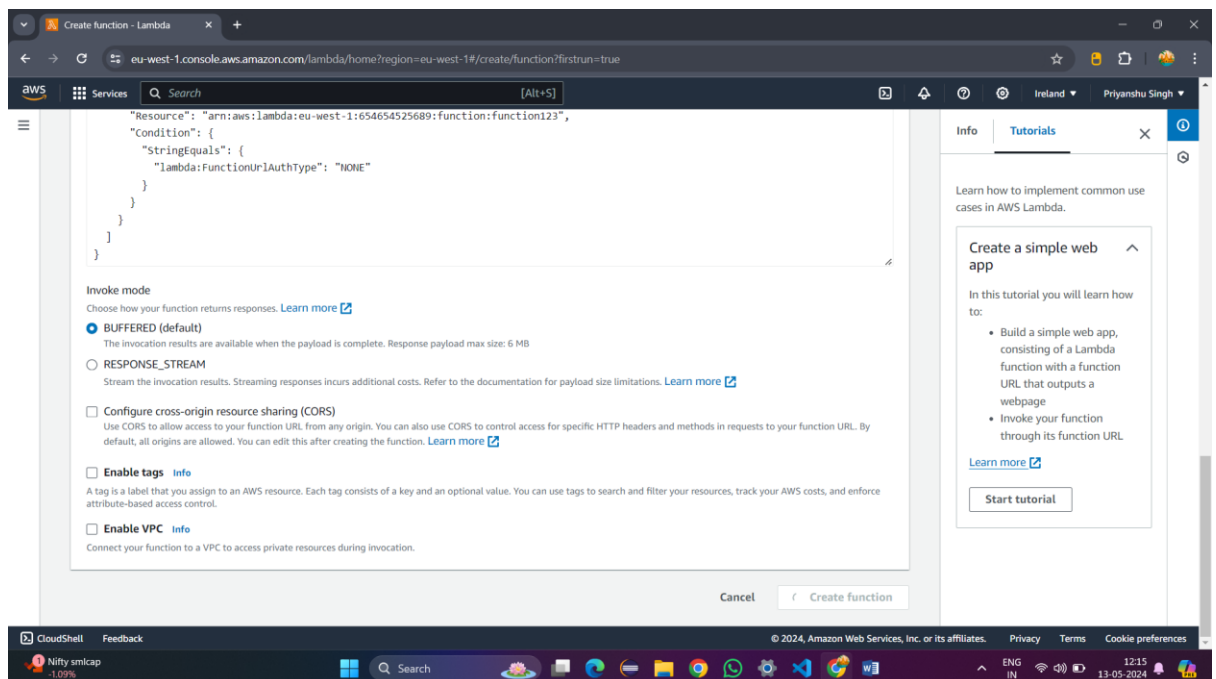

2. Give function name and then in Runtime select any language let Python 3.12

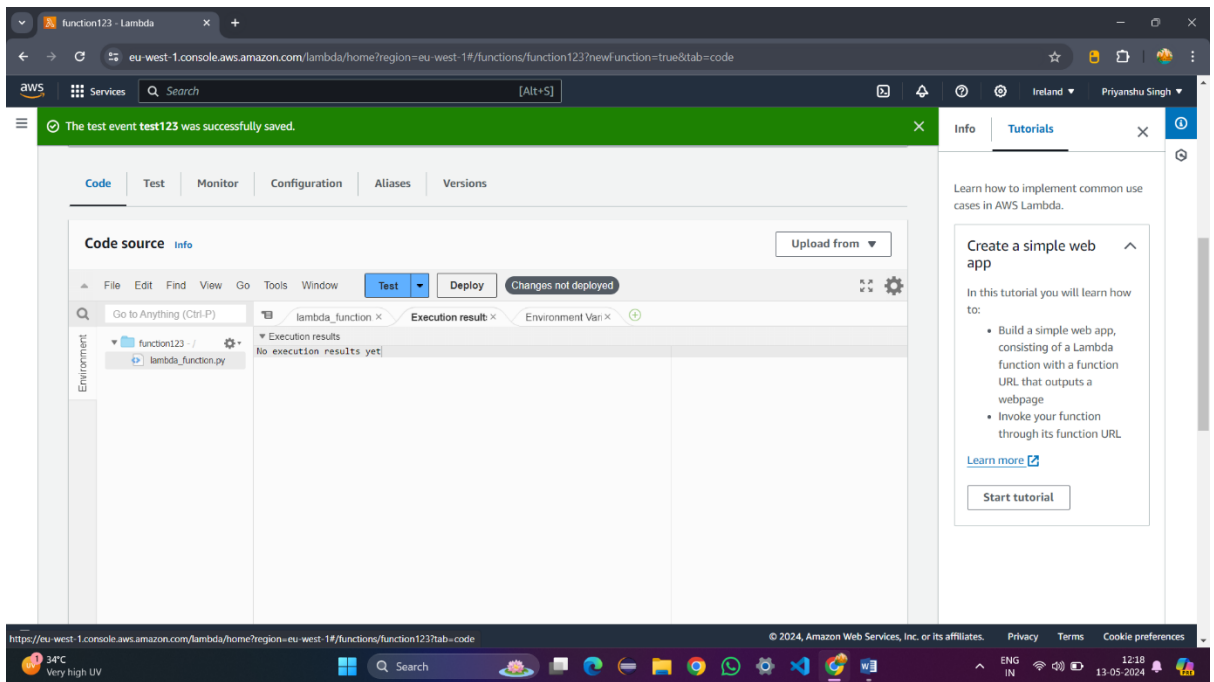

3. Now in Advanced settings click on Enable function URL then in NONE option in Auth type.

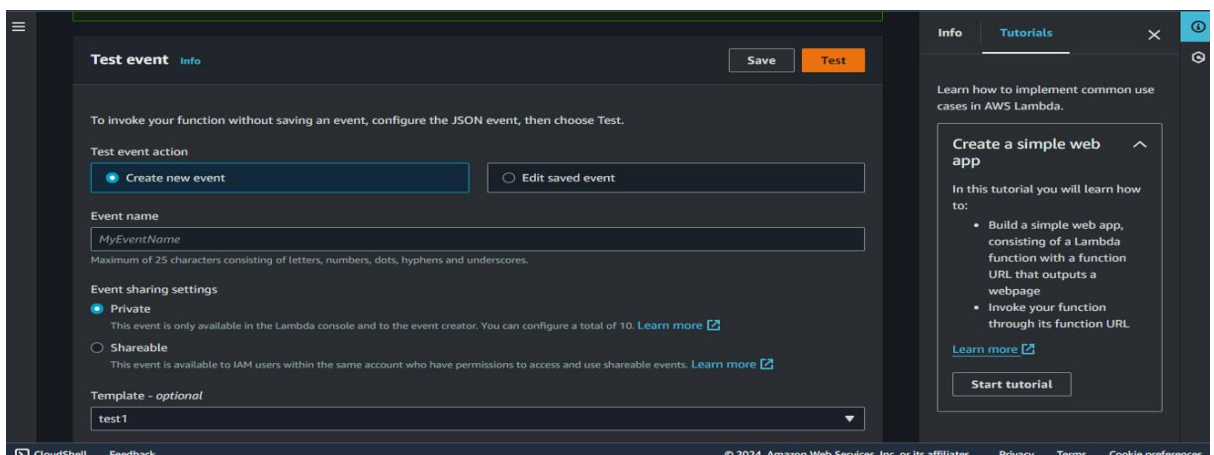

4. Click on Create function.

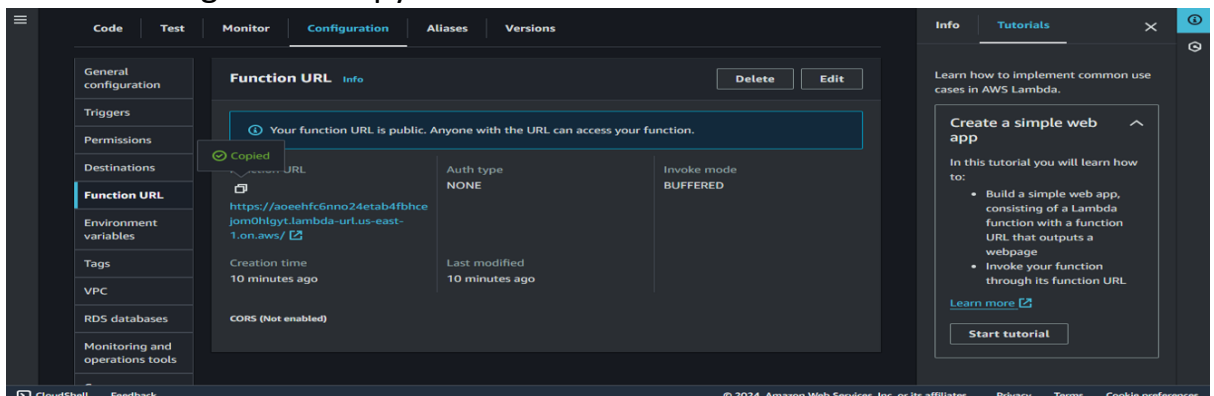

5. Now in Code section change the code then Deploy.

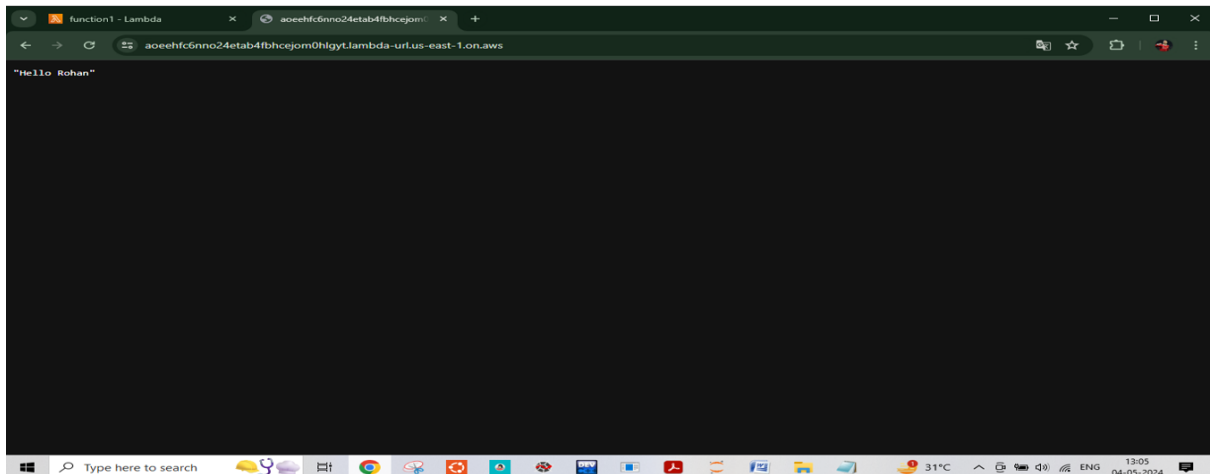

6. Now in Test click on Create new event and give name test1 and then click on Test.

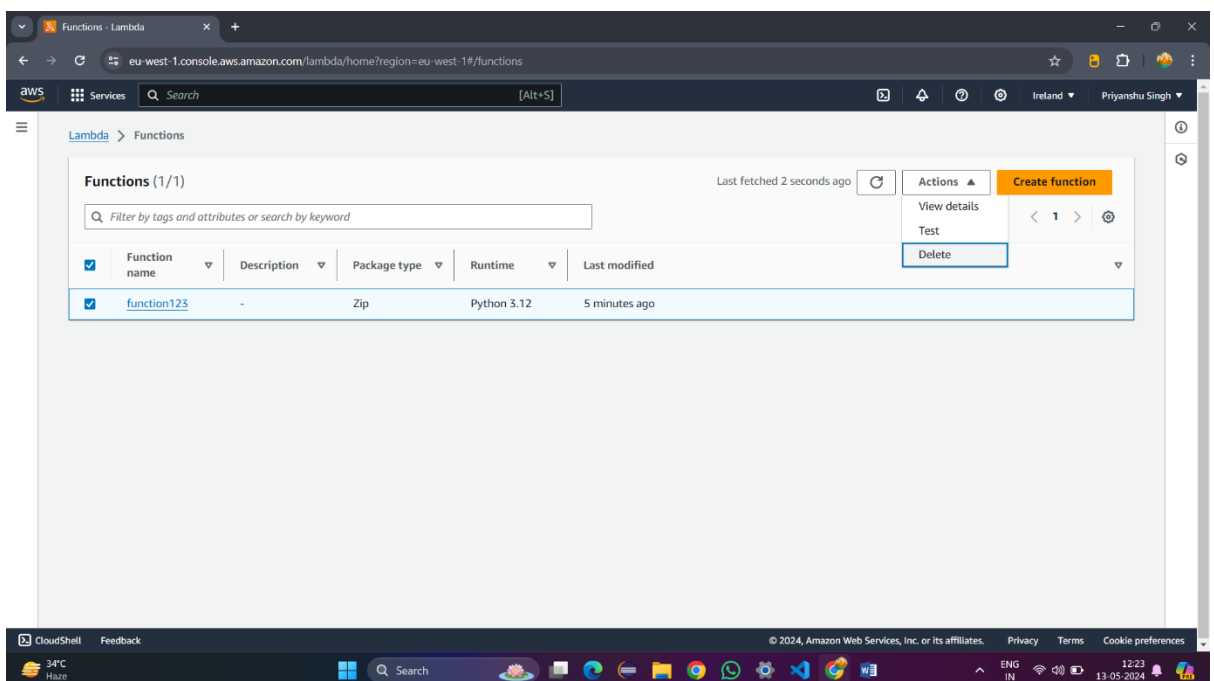

7. Now in Configuration copy function url.

8. At last paste that in new tab and you can see changed code.

9. After all go back to function , select it and then in Actions click on Delete.

10. Now confirm your delete and close.
